

## WHAT IS NEW?

Dear Customer,

Eurofins MWG Operon is pleased to introduce a new, upgraded portfolio for DNA and RNA synthesis products, together with a unique range of online features which have been designed to add more convenience to your daily routine work in the lab – before, during and after your experiments with oligonucleotides.

### New Portfolio Structure

We have developed a new category of products, named "Optimised Application Oligos". Oligos in this category are specified according to their respective use in standard PCR, sequencing, probe based qPCR and Random Amplified Polymorphic DNA (RAPD) applications.

The specific set-up of "Optimised Application Oligos" allows you to place your order with just a few clicks to receive your optimum oligo in express time.

### Optimised Application Oligos

- PCR Primer
- Sequencing (Standard Vector) Primers
- RAPD 10mer Kits
- qPCR Probes

If you prefer to set up your individual specifications for scales, purifications and modifications for your oligo orders, the „Oligo à la Carte" is the service of choice. The "Oligo à la Carte" also contains our classic HPSF oligos.

Through the means of smart integrative menu functions, initiated according to your choice of **Unmodified DNA Oligos** or **Modified DNA Oligos**, the order process has been designed for ultimate convenience while retaining a maximum range of options.

### Oligo à la Carte

- **Unmodified DNA Oligos à la Carte**
  - Salt Free Oligos
  - HPSF purified oligos
  - HPLC purified oligos<sup>1)</sup>
  - HYPUR purified oligos<sup>1)</sup>
- **Modified DNA Oligos à la Carte**
- **Additional Services** such as concentration adjustment, mixing and aliquoting

In addition, specialised oligonucleotide services complete our new portfolio.

- Plate Oligos
- RNA Oligos
- Large Scale Synthesis
- Oligo Design Services

<sup>1)</sup>Please note that pricing has been changed to price per base instead of price per oligo.

### New Services & Features

- **Three convenient ways to enter oligo names and sequences**
  - Single entries of primer name and sequence
  - Copy & paste functionality
  - Upload options of existing primer lists (.xls, .csv, .txt)
- **All oligo documents are stored in your personal account and can be downloaded online**
  - Oligonucleotide synthesis report and data sheet
  - Delivery note
  - Oligonucleotide quality report
- **Individual settings within your Personal Preferences in "My Account"**
  - Various layouts for custom specific tube labels can be selected
  - Email notifications can be requested
  - Shipping address can be added and modified
  - Divergent billing addresses are supported
- **Printing of extra tube labels per order**
- **Online order tracking and order history features**
  - Tracking of the process and delivery status of your orders
  - Downloading of order confirmations and delivery notes
  - Viewing and downloading of datasheets, synthesis and quality reports
  - Secure data download and storage of 2 years
  - Convenient search and re-order option
- **Group Administration tool to share sequencing results, stored sequencing primers and oligo orders with colleagues of your choice**
- **Online Design Tools**
  - PCR Primer Design
  - qPCR Primer & Probe Design
  - Sequencing Primer Design
  - siRNA Design
- **Oligo Property Screen/Oligo Dilution Calculator**
